EXPERIMENT 2

Setting Up a Zoho Creator Account and Exploring the Platform

Insurance Claim Request & Processing Management | Zoho Creator

Objective

Explore the Zoho Creator environment and locate the main areas required to build the Insurance Claim Request & Processing Management application.

Platform / Application

Platform: Zoho Creator. Application: Insurance Claim Command Center / Insurance Claim Request & Processing Management. Primary form: Claim_Request_Form. The LC-04 specification and supplied application export were used as the project context.

Theory

Zoho Creator organizes an application around forms for data entry, reports for viewing records, pages for custom interfaces, workflows for automation, and settings for access and deployment.

Procedure

1. Sign in to Zoho Creator using an authorized account and create a new application named Insurance Claim Request & Processing Management.

2. Open the application builder and identify Forms, Reports, Pages, Workflows, Connections and application settings where available.

3. Open Claim_Request_Form and inspect its fields, sections, validation settings and submit action.

4. Open the claim report and inspect record views, filters, sorting and field visibility.

5. Save changes and preview the application; menu names may vary slightly by account or interface version.

Design / Observation Table

Platform area	Use in the insurance application
Forms	Capture claim and policy information
Reports	Review, filter and track submitted claims
Pages / UI Builder	Create a claims overview or dashboard
Workflows	Automate acknowledgement and status updates
Settings / Users	Manage access and deployment settings

Result / Conclusion

The application builder provides the main low-code workspace. The exact features available depend on account edition, permissions and the app configuration.

Implementation note

This is a lab-record document tailored to the insurance-claim application. Steps describing integrations, AI, security, deployment or automation are guidance to configure and verify in the live Zoho Creator account; they should not be treated as proof that a feature is already enabled.
