EXPERIMENT 4

Data Modelling and Form Design for an Insurance Claim Application

Insurance Claim Request & Processing Management | Zoho Creator

Objective

Design the claim form and its data fields so that claim requests can be captured consistently and reviewed efficiently.

Platform / Application

Platform: Zoho Creator. Application: Insurance Claim Command Center / Insurance Claim Request & Processing Management. Primary form: Claim_Request_Form. The LC-04 specification and supplied application export were used as the project context.

Theory

A form model defines fields, field types, required values and relationships. The supplied LC-04 specification names Claim_Request_Form and describes claimant, contact, claim, scheduling and declaration sections. The supplied app export also includes status, evidence and settlement-related fields.

Procedure

1. Create or inspect the Claim_Request_Form.

2. Group fields into Claimant Details, Contact Details, Claim Details, and Scheduling & Declaration.

3. Add the 13 basic fields specified in LC-04: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox.

4. Apply required-field and type validation; restrict claim amount to positive values and prevent future incident dates where supported.

5. Review the provided app export for additional fields such as Claim_ID, Claim_Status, Damage_Photo, Repair_Estimate_Upload and Net_Payable_Amount.

Design / Observation Table

Section	Example fields
Claimant details	Claimant_Name, Claimant_Type, Policy_Number
Contact details	Email_Address, Contact_Number, Residential_Address
Claim details	Claim_Type, Date_Of_Incident, Claim_Amount_Requested, Supporting_Documents_Available, Incident_Description
Scheduling / declaration	Preferred_Callback_Time, Declaration_Of_Authenticity

Result / Conclusion

A structured claim form reduces missing information and creates a consistent record for filtering, verification and assignment. Keep field names consistent across forms, reports and workflows.

Implementation note

This is a lab-record document tailored to the insurance-claim application. Steps describing integrations, AI, security, deployment or automation are guidance to configure and verify in the live Zoho Creator account; they should not be treated as proof that a feature is already enabled.
